

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Claims 1-8 (withdrawn)

Claim 9 (canceled).

Claim 10 (currently amended). A ceramic body having a monolithic multilayer structure, comprising:

at least one passive electronic module;

at least one layer comprising a first ceramic material made of glass ceramic, which becomes compacted in a first temperature interval; and

at least one layer comprising a second ceramic material made of glass ceramic, which becomes compacted at a temperature interval that is different from the first temperature interval; and

at least one layer comprising a metal foil to form an electrical conductor ~~The body according to claim 9, wherein the ceramic materials exhibit an essentially identical coefficient of expansion of between 6 and 7 ppm/K at a specific temperature range.~~

Claim 11 (currently amended). The body according to claim 10, which includes a layer stack having a layer sequence in a direction, and a layer stack having the same layer sequence in opposite direction, are arranged on top of one another.

Claim 12. (currently amended). The body according to claim 10, wherein the second ceramic material becomes compacted at the temperature interval between 720°C and 850°C.

Claim 13 (previously amended). The body according to claim 12, wherein the second ceramic material becomes compacted at the temperature interval between 870°C and 970°C.

Claim 14. (currently amended). The body according to claim 10, wherein the body comprises at least one layer composed of an electrode material.

Claim 15. (previously amended). The body according to claim 14, wherein the body is arranged on a metal body.

Claim 16 (previously amended). The body according to claim 15, wherein the at least one passive electronic module, the layer comprising an electrode material and/or the metal body comprises at least one material, which is selected from the group gold, copper, molybdenum, palladium, platinum, silver and/or wolfram.

Claim 17 (previously canceled).

Claim 18 (previously amended). The body according to claim 14, wherein the layer comprising an electrode material comprises at least one material, which is selected from the group consisting of gold, copper molybdenum, palladium, platinum, silver and tungsten.

Claim 19. (currently amended). The body according to claim 10 9, wherein one of the ceramic materials becomes compacted at the temperature interval between 870°C and 970°C.

Claim 20. (currently amended). The body according to claim 10 9, which is a substance for a high-frequency module.
